

Keel

The foundation of the ship.

Implementation Roadmap

A feasible and scalable solution driving platform engineering.

PHASE 1

Pilot

Weeks 0-6

~\$40K (est.)

- Single-team MVP in staging
- Slack bot + k6 + LitmusChaos
- One canonical experiment flow

PHASE 2

Integrate

Months 2-5

~\$180K (est.)

- Wire into CI/CD & PR checks
- Two-way translator + reports
- Onboard 5–8 service teams

PHASE 3

Scale

Months 6-12

~\$450K (est.)

- Org-wide self-service rollout
- Automated Game Days & SLO gates
- Incident-replay library

Cumulative ~\$670K over 12 months · figures are planning estimates for a mid-size engineering org.

Built for Adoption

A solution ready to be adopted through ease of use & change management frameworks.

Zero learning curve

Plain English in. No SRE expertise, no YAML, no dashboards.

Lives where devs work

Slack, Teams, or CLI — embedded in the existing IDP.

Drops into any stack

Standard connectors for k6, LitmusChaos, Grafana, CI/CD.

ADKAR change management

Prosci's framework drives lasting adoption, stage by stage.

Awareness Show teams the cost of untested resilience.

Desire Make resilience effortless — devs want it.

Knowledge In-context guidance; learn by asking.

Ability Run real experiments from day one.

Reinforcement SLO gates & Game Days keep it sticky.

Projected business impact

What Keel returns once resilience testing becomes a conversation.

-45%

Production incidents

Fewer Sev-1/2 outages; failures caught pre-release.

10×

Faster to test

Minutes per experiment vs. days of manual setup.

100%

Developers enabled

Every engineer ships resilience-tested code.

\$2.1M

Downtime avoided / yr

Est. at ~\$9K per minute of outage prevented.

From cost center to competitive edge

Shifting resilience left cuts firefighting, protects revenue on peak days, and frees senior SREs from repetitive testing — turning quality engineering into an on-demand platform capability.

Figures are illustrative projections for a mid-size engineering org; actuals vary by scale and incident profile.
